

Utility Programs that Offer Incentives and Rebates for Energy-Efficient Windows

Presented by the Efficient Windows Collaborative, March 2009

- Do you intend to replace old windows with high-performance, energy efficient windows?
- Do you plan to build a new home with windows that keep energy costs low and provide for a comfortable interior?
- Are you looking for utility programs within your state that can help you finance such an investment in efficient windows?

The following pages give an overview of utility and State programs that can help you as a resident, building owner or builder to finance improvements in window energy efficiency.

Programs are listed by state and by the specific energy supply companies that administer the programs. For detailed information about each program, please refer to the web links in the list.

Some programs aim to improve home energy performance in general, others explicitly focus on window energy performance. Direct mention of windows (and shades, tints, and weatherstripping) **is marked in red**. For details about the eligibility criteria of specific programs, please contact the respective utility sponsors.

PLEASE NOTE: This list does by no means give complete information about ALL window-related utility programs in the country. Please contact your utility for more information about available programs.
